SUMMARY OF MAJOR TRAFFIC ACCIDENTS

Accidents

There were 16,372 major traffic accidents in the State of Hawaii in 1983, which was a slight decrease from the 16,407 accidents in the previous year. A major traffic accident is defined as an accident in which total property damage involving a motor vehicle on a public highway amounted to at least $300.00 ($100.00 if the accident occurred prior to July 1, 1974) or one in which a person sustained injury as a result of the accident.

Almost 35 per cent of all the accidents occurred on a Friday or Saturday. One-fourth of the fatal accidents occurred on a Saturday.

July was the worst month for accidents and May the worst month for fatal accidents.

Most of the accidents, approximately 57 per cent, occurred during daylight hours. However, 80 per cent of the fatal accidents occurred during the hours of darkness, dawn, or dusk.

In all accidents involving collisions between two or more vehicles, 38 per cent occurred at intersections. In fatal accidents, one-fourth occurred at intersection locations.

For accidents involving pedestrians, 54 per cent of all accidents and 86 per cent of the fatal accidents occurring at intersections involved vehicles traveling straight ahead. At non-intersection locations, it was 84 per cent for all accidents and 88 per cent for fatal accidents.

Persons Killed and Injured

The State Department of Transportation adopted the "thirty-day rule" for reporting traffic fatalities beginning with the 1979 statistical data. The rule, which was established by the U. S. Department of Transportation, states that for statistical purposes, only deaths occurring within thirty days of the accident will be reported as fatalities.

A total of 139 traffic fatalities was recorded in the State during 1983. This was a decrease of almost 16 per cent from the previous year's total of 161 deaths. The 139 deaths also was the lowest in ten years.

There were also fewer people injured in traffic accidents in 1983, a total of 11,852 as compared to the 11,865 injured in 1982.

The number of pedestrians killed in traffic accidents decreased 46 per cent, from 35 in 1982 to 24 in 1983. Nearly 38 per cent of the pedestrians killed in 1983 were 65 years or older.

Pedestrians injured, however, increased 8 per cent, from 667 in 1982 to 727 in 1983. Over 32 per cent of the pedestrians injured in 1983 were 14 years or younger and 11 per cent were 65 years or older.

Death Rate

The fatality, or death, rate (per one hundred million vehicle miles traveled) for the State in 1983 was 2.36. It is a new low death rate for the State.

Drivers

Age group 15-24 accounted for over 31 per cent of the drivers involved in all accidents and for 37 per cent of those in fatal accidents. Due to the high accident involvement of drivers in this age group, it has been divided into sub-groups of 17 years and under, 18 and 19, and 20-24. The driver involvement index (per cent involved in accidents vs. per cent registered) indicates that sub-group "17 years and under" was highest for all accidents. For fatal accidents, the driver involvement index was highest for sub-group "18 and 19".

The number of drinking drivers in the State has kept decreasing since 1979. There was a significant decrease of 10 per cent in 1982. This trend has continued in 1983 with a noticeable decrease of 11 per cent from the previous year. However, the trend is in reverse for fatal accidents. The number of drinking drivers has increased the past three years. There were 82 drinking drivers involved in fatal accidents in 1981, 84 in 1982, and 93 in 1983.

Motor Vehicles

Motor vehicles involved in all accidents increased slightly from 28,423 in 1982 to 28,804 in 1983 while those involved in fatal accidents decreased from 202 in 1982 to 195 in 1983.

The number of motorcycles and motorscooters involved in accidents has been decreasing, from a high of 619 in 1978 to 374 in 1983. Accidents involving busses have also been decreasing, from 596 in 1979 to 374 in 1983.

In fatal accidents, the number of motorcycles and motorscooters involved in 1983 was 20. This was the first time since 1978 when there were 20 or more motorcycles and motorscooters involved in fatal accidents.

Busses continue to have the worst involvement index (per cent involved vs. per cent registered) in all accidents while motorcycles and scooters have the worst involvement index in fatal accidents.
